(c) A cell of e.m.f. E and internal resistance r is connected to the circuit, as shown in Fig. 6.2.

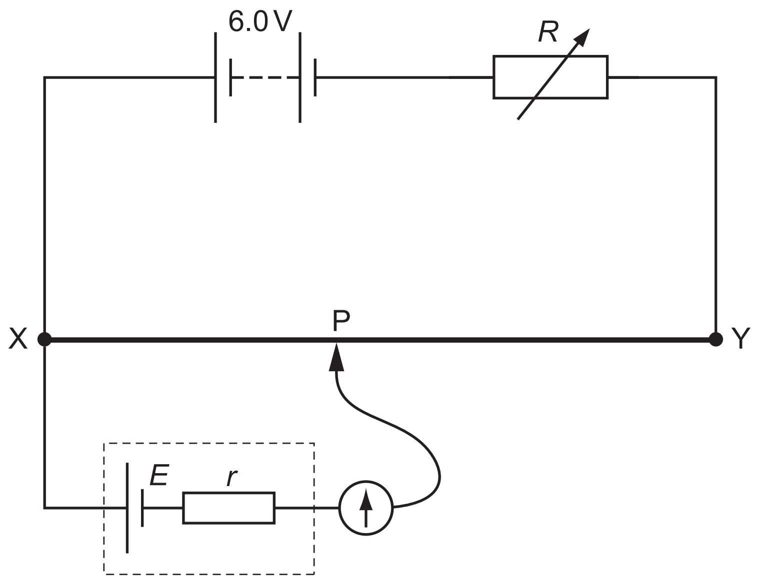

Fig. 6.2

Resistance R is unchanged.
The movable connection P is positioned on wire XY so that the galvanometer reading is zero.
Distance XP is 1.24 m.

(i) Calculate E.

E = ... V [2]

(ii) The value of R is now decreased.

State and explain the change that must be made to the position of P on wire XY so that the galvanometer reads zero again.
