5 A company builds and sells furniture to customers. The company stores data about customers, their payment cards and their furniture orders in a database.

The database, `FURNITURE`, has the following tables:

`CUSTOMER(CustomerID, Name, Phone)`

`CUSTOMER_CARD_DATA(CardID, CustomerID, CardType, CardNumber, EndDate)`

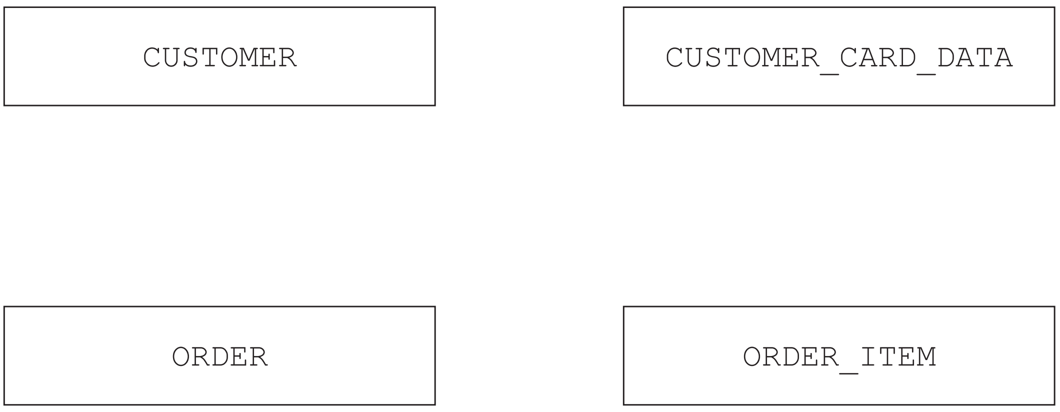
`ORDER(OrderID, CustomerID, TotalCost, Paid, OrderDate, Complete)`

`ORDER_ITEM(OrderItemID, OrderID, Type, Height, Width, Depth, Details)`

The primary keys are underlined in each table.

The attribute `Complete` in the table `ORDER` stores the Boolean value `TRUE` if the order has been built and `FALSE` if the order has not been built.

(a) Complete the entity-relationship (E-R) diagram for the database.



[3]

(b) Identify **one** attribute in the table `CUSTOMER_CARD_DATA` that could be a candidate key.

.... [1]

(c) Identify **two** tables in the database that contain one or more foreign keys.
Give **one** attribute that is a foreign key in each table.

	Table	Foreign key
1		
2		

[2]

(d) Explain the reasons why the data in the table `ORDER_ITEM` cannot be stored in the table `ORDER`

....

....

.... [3]

(e) Write an Structured Query Language (SQL) script to output the customer ID, the customer's name and the total cost of the customer's orders that have **not** been paid.

The output of the total cost must have an appropriate title.
