(d) Another result of a calculation that is stored in a register is the binary number 01000010

Give the denary number that will be displayed on the screen for this binary number.

01000010 .... [1]

Working space

....

....

....

(e) Two binary numbers stored in the registers are 01110110 and 00110000

Add the binary numbers using binary addition. Show all your working.

Give your answer in binary.

```
    0 1 1 1 0 1 1 0
+   0 0 1 1 0 0 0 0
```

[3]

(f) The result of a calculation could be a negative denary number.

State how the calculator could represent a negative denary number as a binary number.

.... [1]

(g) The electronic calculator is an example of an embedded system.

Explain why it is an example of an embedded system.

....

....
