Question	Answer	Marks
9(b)(i)	*any **four** from :* 1 increase then decrease **;** 2 optimum temperature at 29 °C **;** 3 data quote – two temperatures and two rates with units **;**	**4**

temperature / °C ±0.5	rate of photosynthesis / $mg\ g^{-1}\ h^{-1}$ ±0.05
2.5	0.75
5	1.1
10	1.8
20	2.95
29	3.5
30	3.45
40	2.65
45	1.5
48	0.5

increase / before 29 °C
4 more kinetic energy for, enzyme (activity) / AW **;**

5 temperature is the limiting factor **;**

decrease / after 29 °C
6 denaturation of, rubisco / enzymes / oxygen-evolving complex **;**

7 AVP **;** e.g. photorespiration limiting the rate at above 25 °C
