

- (b) (i) Identify the object-oriented programming (OOP) feature whose function includes restricting external access to the data.

..... [1]

- (ii) Describe what is meant by the OOP feature **inheritance**.

.....

 [2]

- 12 The pseudocode algorithm checks whether a location in a stock file `StockList.dat` is empty or not. The location is given by the user. If the location is empty, a suitable message is displayed, otherwise the item stored at that location is displayed.

Complete this file-handling pseudocode algorithm.

```
DECLARE Location : INTEGER
DECLARE Item : STRING
DECLARE Continue : BOOLEAN
DECLARE Answer : CHAR
Continue ← TRUE
```

```
OPENFILE .....
WHILE Continue
  OUTPUT "Enter a location between 1 and 500: "
  INPUT Location
```

```
  GETRECORD .....
  IF Item = "" THEN
    OUTPUT "This record is missing."
  ELSE
    OUTPUT "The item in stock is ", .....
  ENDIF
  OUTPUT "Another location (Y or N)?"
  INPUT Answer
  IF Answer <> 'Y' THEN
    Continue ← FALSE
  ENDIF
ENDWHILE
```

```
  OUTPUT "End of program"
```
