

15 The equation for the decomposition of hydrogen peroxide is shown.

The reaction is exothermic.

When a small amount of a catalyst is added, the oxygen is produced more quickly.

Which statement about the catalyst is correct?

- A** The catalyst makes the reaction more exothermic.
- B** The mass of catalyst is the same before and after the reaction.
- C** The catalyst increases the final volume of oxygen produced.
- D** All of the catalyst is used up in the reaction.
