

34 A radioactive source is placed 20 mm in front of a detector.

The count rate from the source is 2000 counts/minute.

With a thin sheet of paper between the source and the detector, the count rate is 2000 counts/minute.

With a sheet of aluminium 5 mm thick between the source and the detector, the count rate is 1200 counts/minute.

Which radioactive emissions are coming from the source?

- A** alpha, beta and gamma
- B** alpha only
- C** beta and gamma only
- D** beta only
