

Refer to the **insert** for the list of pseudocode functions and operators.

1 A program is being developed to help the manager of a shop control the stock.

(a) An identifier table has been used during the design stage.

Complete the identifier table:

Example value	Explanation	Variable name	Data type
"Fruit"	a category of stock that is sold in the shop		
20/02/2025	when an item was sold		
12.67	the cost of an item		
TRUE	to indicate if an item is in stock		

[4]

(b) A module `Sales()` is part of the stock control program.

The table contains pseudocode extracts from the module `Sales()`

Each extract may include all or part of:

- assignment
- selection
- iteration (repetition).

Complete the table by placing one or more ticks (✓) in each row:

Pseudocode extract	Assignment	Selection	Iteration
<code>Result ← CalculateTotal()</code>			
<code>WHILE IsClosed</code>			
<code>REPEAT INPUT Value UNTIL Sales[4] > Value</code>			
<code>IF Sales[Current] <= 150 THEN Discount ← TRUE ENDIF</code>			
<code>CASE OF Option</code>			

[5]
