

- (a) The flowchart contains logic errors.

One logic error is that `BonusPay` will **not** be set to 10 although the `ValueOfSales` input is between 2000 and 4000 inclusive.

- (i) Explain why this error occurs.

.....
 [1]

- (ii) Explain how this error could be corrected.

.....
 [1]

- (b) There are different ways to reduce the risk of errors when developing the new program, such as the use of constants.

- (i) State a value that could be replaced by a constant in the function `CalculateBonus()`

..... [1]

- (ii) Explain how the use of constants helps to reduce the risk of programming errors.

.....

 [2]

- (iii) One other way that can reduce the risk of errors when writing the program is the use of library routines.

Explain how library routines can reduce the risk of programming errors.

.....
