

- (c) Pseudocode has been used to design modules for the program to control the production line.

The table shows **four** valid pseudocode expressions.

Complete the table by giving the data type of the evaluated expression.

Expression	Data type
RIGHT(MachineCode, 4)	
Speed * 2.5	
NOT Status	
IS_NUM(Check)	

[4]

- (d) A global array `Product` is used as part of the pseudocode design being developed to control the production line. `Product` is used to store the number of rejected items each day.

The following pseudocode statement is used to assign a value to an element of the array:

`Product[x, y] ← 23`

The lower and upper bound values are shown in the table:

Variable	Lower bound	Upper bound
x	0	99
y	0	9

- (i) State the number of dimensions of `Product`

..... [1]

- (ii) State the total number of elements in array `Product`

..... [1]

- (iii) Give the pseudocode declaration for the array `Product`

..... [2]
