

- (b) In a different program, the programmer decides to implement a linked list using an array of records.

- (i) The array is represented in the diagram.

A pointer value of -1 indicates the end of the linked list.

Complete the pointer field to produce a linked list that is in alphabetical order.

Index	Data	Pointer
0	"Neptune"	
1	"Jupiter"	
2	"Saturn"	
3	"Earth"	
4	"Mercury"	
5	"Uranus"	

[3]

- (ii) The variable `StartPointer` contains the index of the first item in the linked list.

State the value of the variable `StartPointer`

..... [1]

- (c) A third program is also being created to manage a queue.

Describe **two** features of a queue.

Feature one

.....

Feature two

.....
