

- 6** A company uses a relational database to store data about its customers, employees and the individual repair jobs that customers have booked.

- (a)** Explain the benefits of using a relational database instead of a file-based approach.

[3]

- (b)** The company decides which employees will work on each repair job. An employee can log into the database to access information about their repair jobs.

The database is normalised and includes these tables:

- CUSTOMER stores personal data about each customer
- EMPLOYEE stores personal data about each employee
- LOGIN_DATA stores the username and password for each employee
- JOB stores the data about each repair job
- JOB_EMPLOYEE stores the employees that are working on each repair job.

- (i) Identify each relationship between the database tables **and** explain how each relationship can be implemented in the normalised database.
