

- 3 An algorithm will output the **last** three lines from a text file `Result.txt`

The lines need to be output in the same order as they appear in the file.

Assume:

- Three variables `LineX`, `LineY` and `LineZ` will store the three lines. These are of type string and all three variables have been initialised to an empty string.
- The file exists and contains **at least** three lines.

- (a) The algorithm to output the lines is expressed in eight steps.

Complete the steps.

1. Open the file
2. Loop until
3. and store in `ThisLine`
4. Assign `LineY` to `LineX`
5. Assign `LineZ` to `LineY`
6. Assign `ThisLine` to `LineZ`
7. After the loop,
8. Output `LineX`, `LineY`, `LineZ`

[4]

- (b) Explain the purpose of steps 4, 5 and 6 in the algorithm from part (a).
