

- 5 A program contains a global 1D array `Data` with 100 elements of type `INTEGER`.

The program contains a function `Process()` expressed in pseudocode as follows:

```

FUNCTION Process(Number : INTEGER, Label : STRING) RETURNS STRING
  DECLARE Index, Count : INTEGER
  DECLARE ReturnValue : STRING

  Count ← INT(100 / Number)
  Index ← Data[Index]

  CASE OF (Index MOD 2)
    0 : ReturnValue ← TO_UPPER(RIGHT(Label, Count))
    1 : ReturnValue ← "*****"
  ENDCASE

  RETURN RetVal
ENDFUNCTION

```

- (a) Run-time errors can be generated in different ways. For example, a run-time error will be generated if a function is called with invalid parameters.

The pseudocode contains three statements that could generate a run-time error.

Write the **three** statements **and** explain how each could generate a run-time error.

Statement 1
