

(b) The array `Horses` stores objects of type `Horse`.

(i) The program has two horses:

- The horse named 'Beauty' can jump a maximum height of 150 cm and has a success percentage rate of 72%.
- The horse named 'Jet' can jump a maximum height of 160 cm and has a success percentage rate of 65%.

Write program code to:

- declare the array, `Horses`, local to the main program with space for **two** `Horse` objects
- store the **two** horses described in the array
- output the name of both `Horse` objects from the array.

Save your program.

Copy and paste the program code into part **2(b)(i)** in the evidence document.

[5]

(ii) Test your program.

Take a screenshot of the output.

Save your program.

Copy and paste the screenshot into part **2(b)(ii)** in the evidence document.
