

(b) As a reminder, the CASE structure in the pseudocode is:

```

CASE OF CaseVar
  1 : Num[Index] ← Num[Index] + Index //clause one
    Index ← Index + 1
    Count ← Count + 1

  2 : Num[Index] ← Num[Index] + Index //clause two
    Index ← Index + 2
    Count ← Count + 2

  3 : Num[Index] ← Num[Index] * 2      //clause three
    Index ← Index + 3
    Count ← Count - 1

  4 : Count ← Count + 4                //clause four
  OTHERWISE : Count ← 20
ENDCASE

```

The CASE structure could be optimised by combining two existing clauses.

(i) Identify the CaseVar values for these **two** existing clauses.

..... [1]

(ii) Write pseudocode for a single clause to replace the **two** clauses identified in (b) (i).

.....

 [2]
