

Write **assembly language** code, using **only** the given instruction set to:

- store the denary value 250 as labelled variable `X`
- store the value stored in location 563 as labelled variable `Y`
- add the value stored in variable `X` to the value stored in variable `Y`
- subtract the value stored in location 899 from the current value in the Accumulator
- store the result in variable `Total`.

Show the initialisation and values of the variables `X`, `Y` and `Total` in the table provided.
