

- (a) (i) Write program code to declare the class `Bird` and its constructor.

Do **not** declare the other methods.

All attributes should be private.

Use your programming language appropriate constructor.

If you are writing in Python, include attribute declarations using comments.

Save your program as **Question1\_N25**.

Copy and paste the program code into part **1(a)(i)** in the evidence document.

[4]

- (ii) The method `GetSpecies()` returns the species of the bird.

Write program code for `GetSpecies()`

Save your program.

Copy and paste the program code into part **1(a)(ii)** in the evidence document.

[2]

- (iii) The method `GetPosition()` returns a string of the bird's data in the format:

`"X = " & <XPosition> & " Y = " & <YPosition>`

An example string for a bird is:

`X = 500.0 Y = 250.0`

Write program code for `GetPosition()`

Save your program.

Copy and paste the program code into part **1(a)(iii)** in the evidence document.
