

- (c) In a second experiment, object B is released from the same height and given the same initial speed as in (b) but at a release angle θ to the vertical, as shown in Fig. 1.2.

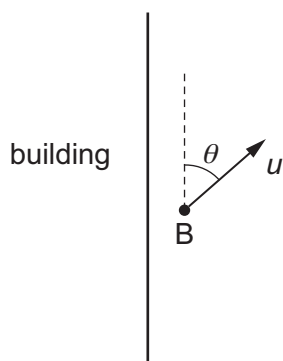

Fig. 1.2

- (i) State and explain whether the time taken for object B to reach the ground is less than, the same as or greater than the time in (b)(i).

.....

 [2]

- (ii) By considering energy, state and explain the effect of the change in release angle on the speed at which B reaches the ground.
