

Fig. 2.3 is a copy of Fig. 2.2 without the labels but with two magnetic field lines shown.

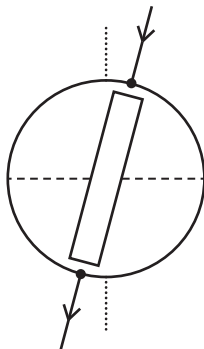

Fig. 2.3

- (i) On Fig. 2.3, label the magnetic poles with the letters N and S to indicate which one is the magnetic N pole and which one is the magnetic S pole. [1]
- (ii) On Fig. 2.3, draw field lines to represent the Earth's magnetic field outside the Earth. [2]
- (c) An observer moves around the surface of the Earth.

- (i) Use your answer in (a)(ii) to explain why the observed gravitational field of the Earth does not vary around the surface.

.....

.....

..... [2]

- (ii) With reference to your answer in (b)(ii), describe how the observed magnetic field of the Earth varies around the surface.
