

- 5 A goods train passes through a station at a constant speed of 10 m s^{-1} at time $t = 0$. An express train is at rest at the station. The express train leaves the station with a uniform acceleration of 0.5 m s^{-2} just as the goods train goes past. Both trains move in the same direction on straight, parallel tracks.

At which time t does the express train overtake the goods train?

- A 6 s B 10 s C 20 s D 40 s
- 6 A ball is held above the ground and released. It falls to the ground and bounces several times.

The graph shows the variation with time t of the velocity v of the ball.

Four points on the graph are labelled P, Q, R and S.

Which statement is **not** correct?

- A The area under line PQ represents the initial height of the ball.
- B The collisions of the ball with the ground are inelastic.
- C The gradient of the line RS represents the acceleration due to free fall.
- D The maximum upwards velocity of the ball is reached at point P.
