

- 2 (a) (i) Define pressure.
-
- [1]
- (ii) Explain how hydrostatic pressure results in an upthrust force acting on a solid object immersed in a liquid.
-
-
-
- [2]

(b) A small steel ball of radius r and mass m falls vertically at terminal speed v through oil.

The viscous drag force D that acts on the ball is given by

$$D = 6\pi\eta r v$$

where η is a property of the oil called its viscosity.

- (i) On Fig. 2.1, draw labelled arrows from the ball to show the directions of the **three** forces that act on the ball as it falls.

Fig. 2.1 [3]

- (ii) Determine the SI base units of η .

base units [2]

(c) The oil in (b) has a density of 920 kg m^{-3} and a viscosity of 4.7 in SI units.

The steel ball has a mass of $2.4 \times 10^{-3}\text{ kg}$ and a radius of $4.2 \times 10^{-3}\text{ m}$.

- (i) Show that the upthrust force acting on the ball is $2.8 \times 10^{-3}\text{ N}$.

[1]

- (ii) Determine the terminal speed v of the ball.

$v =$ ms^{-1} [3]
