

- (b) Change the position of Q and adjust the position of P until the rod is again parallel to the bench. Measure p and q . Repeat until you have six sets of values of p and q .

Record your results in a table. Include values of T_P and T_Q in your table.

[8]

- (c) (i) Plot a graph of T_Q on the y -axis against T_P on the x -axis.

[3]

- (ii) Draw the straight line of best fit.

[1]

- (iii) Determine the gradient and y -intercept of this line.

gradient =

y -intercept =

[2]
