

- 3 A drone is used to search for lost animals. The drone is a flying device that can be autonomous or operated using a remote control.

- (a) The drone is a robot.

Give **two** characteristics of the drone that identify it as a robot.

- 1
- 2
- [2]

- (b) The drone has a built-in system to stop it from crashing into objects, for example a tree. The system uses sensors and a microprocessor.

- (i) Identify **one** sensor that could be built into the drone to detect if it is near an object.

..... [1]

- (ii) State what is meant by a microprocessor.

.....

..... [1]
