

- 5 A student stores their schoolwork on secondary storage devices. They store their schoolwork on their home computer and on cloud storage.

(a) Give **two** characteristics of secondary storage.

1

2

[2]

- (b) The home computer has a magnetic storage device, and the cloud storage uses solid-state (flash memory) storage.

Complete the description of how magnetic hard disk drives and solid-state drives (SSD) read data.

Use terms from the list. **Not** all terms need to be used. You should only use a term once.

control	electromagnetic field	flow	loss
NOR gates	opened	pits and lands	platters
ports	remove	sectors	XOR gates

A hard disk has several platters. Each platter is split into tracks and To read data, the read/write head moves over the platters to the position where data starts. The indicates if the data is a 1 or a 0.

A solid-state drive uses NAND gates or It is made of transistors that work as floating gates and gates. The gates control the of electrons to memory cells.
