

5 Complete the description of digital currencies using the terms provided.

blockchains changed datachains decentralised
 deleted encryption passport physical address
 physically records time-stamp traced
 transaction-chains virtually

A digital currency does **not** exist, it can only be accessed electronically.

Some digital currencies have digital ledgers called

These are decentralised databases where each transaction is stored as a new set of data with a and is linked to the previous set of data. This means that transactions cannot be altered, only new transactions added, which allows the location of the data to be
