

- 5 An algorithm has been written in pseudocode to calculate the profit when an item is sold. Values for cost price and selling price are input, the profit is calculated (selling price – cost price) and output. The input of zero for either value stops the algorithm.

```

01 REPEAT
02     OUTPUT "Enter cost price "
03     INPUT Cost
04     OUTPUT "Enter selling price "
05     OUTPUT Sell
06     IF Cost <> 0 OR Sell <> 0
07         THEN
08             Profit ← Sell - Cost
09             OUTPUT "Profit is ", Profit
10     NEXT
11 UNTIL Cost = 0 OR Sell = 0

```

- (a) Identify the line numbers of **three** errors in the pseudocode and suggest corrections.

Error 1 line number
