

- 5 A program is written to only accept data that contains more than 9 characters. The program needs to be tested. The table, when completed, shows appropriate test data that matches the type of test data and the purpose of the test data.

Complete the table by inserting the missing information.

Test data	Type of test data	Purpose of test data
ABC		
	Boundary	
		to make sure that the program accepts data that is an appropriate length

[6]

- 6 This pseudocode algorithm is intended to allow 1000 positive integers to be input and stored in a one-dimensional (1D) array. The integers are added together as they are input and the highest value is identified. At the end of the algorithm, the highest number, the total and the average of the numbers are output.

```

01 DECLARE Numbers : ARRAY[1:1000] OF INTEGER
02 DECLARE Highest : STRING
03 DECLARE Count : INTEGER
04 DECLARE Total : INTEGER
05 Highest ← 1500
06 Total ← 0
07 FOR Count ← 1 TO 1000
08     INPUT Numbers[Count]
09     Total ← Total + Count
10     IF Numbers[Count] > Total
11         THEN
12             Highest ← Numbers[Count]
13     ENDIF
14 NEXT Count
15 OUTPUT "The highest number is ", Highest
16 OUTPUT "The total is ", Total
17 OUTPUT "The average is ", Average / 1000

```

- (a) Identify the line numbers of **five** errors in the pseudocode and suggest a correction for each error.

Error 1 line number

Correction
