

- 9 A company owner has installed a new network. Data is correct before it is transmitted across the network.

The company owner is concerned that data might have errors after transmission.

- (a)** Explain how the data might have errors after transmission.

[3]

- (b)** The company owner decides to introduce an error detection system to check the data for errors after transmission.

The error detection system uses an odd parity check and a positive automatic repeat query (ARQ).

- (i) Describe how the error detection system operates to check for errors.
