

- 7 (a) The string operation `SUBSTRING(FullText, X, Y)` returns a string from `FullText` beginning at position `X` that is `Y` characters long. The first character in `FullText` is in position 1.

Write the pseudocode statements to:

- store the string "IGCSE Computer Science at Cambridge" in `FullText`
- extract and display the words "Computer Science" from the string and store it in a suitable variable
- output the original string in upper case.
