

- 9 A database table, `CapitalCity`, stores data about capital cities from around the world.

Field	Description
Identification	a unique identifier
Name	the name of the city
Country	the name of the country in which the city is located
Continent	the name of the continent in which the city is located
Population	the number of people living in the city
Founded	the year the city was founded
AverageIncome	average income of the city's population, in \$, rounded to 2 decimal places
Subway	whether or not the city has an underground railway system

- (a) Complete the table by writing **one** appropriate field from `CapitalCity` for each data type.

Each field must be different.

Data type	Field
Boolean	
integer	
real	
text	

[2]

- (b) Complete the structured query language (SQL) statement to list only the name, country and population of all the cities in `CapitalCity` from the continent of Asia.

SELECT
 `CapitalCity`
 WHERE = ;
