

[1]

- Input 10 numbers and store them in the array `Numbers[]`
- Input the same 10 numbers again; as each number is input, compare it with its corresponding number in the array `Numbers[]`
 - if the numbers match, move on to the next number
 - if the numbers do not match, display both numbers and ask for the number to be re-entered
 - store the re-entered number in the corresponding array location and move on to the next number.
- When all the numbers have been checked, display a message to say the check has been completed.
