

6 This pseudocode is an algorithm.

```
DECLARE Word : STRING
DECLARE V1 : INTEGER
DECLARE V2 : INTEGER
DECLARE Number : INTEGER
DECLARE Index : INTEGER
DECLARE L1 : CHAR
DECLARE L2 : CHAR
DECLARE Continue : BOOLEAN
INPUT Number
FOR Index ← 1 TO Number
    INPUT Word
    Continue ← TRUE
    V1 ← 1
    V2 ← LENGTH(Word)
    WHILE Continue = TRUE AND V1 < V2 DO
        L1 ← SUBSTRING(Word, V1, 1)
        L2 ← SUBSTRING(Word, V2, 1)
        IF L1 <> L2
            THEN
                Continue ← FALSE
            ELSE
                V1 ← V1 + 1
                V2 ← V2 - 1
            ENDIF
    ENDWHILE
    IF Continue = TRUE
        THEN
            OUTPUT "Successful"
        ELSE
            OUTPUT "NOT successful"
        ENDIF
NEXT Index
```
