

- 5 A farmer has a plough that is an automated system. The plough is used to dig the ground in a field to prepare it for planting seeds.

The plough uses sensors and a microprocessor to maintain a straight line when digging the ground.

- (a) State what is meant by an automated system.

.....
..... [1]

- (b) Describe the role of the microprocessor in this process.

.....
.....
.....
.....
.....
..... [3]

- (c) Give **two** benefits to the farmer of using an automated system for this purpose.

1
.....
2
..... [2]

- (d) The plough uses artificial intelligence (AI) to navigate its way around the field.

Explain how the plough makes use of AI for this purpose.
