

- 9 An algorithm has been written in pseudocode to check if a temperature is in a given range. The temperature values used in the algorithm are correct.

```

01 REPEAT
02     OUTPUT "Please enter temperature "
03     INPUT Temp
04     IF Temperature = 999
05         THEN
06             IF Temperature > 38.0
07                 THEN
08                     OUTPUT "Temperature too high"
09             ENDIF
10             IF Temperature < 35.0
11                 THEN
12                     OUTPUT "Temperature too low"
13             ENDIF
14             IF Temperature >= 35.0 OR Temperature <= 38.0
15                 THEN
16                     OUTPUT "Temperature normal"
17             ENDIF
18         ENDIF
19 WHILE Temperature = 999

```

- (a) Identify the line numbers of **four** errors in the pseudocode and suggest a correction for each error.

Error 1 line number

Correction

.....

Error 2 line number

Correction

.....

Error 3 line number

Correction

.....

Error 4 line number

Correction

.....
