

(b) State the purpose of this algorithm.

.....
..... [1]

(c) Describe the problem that would be caused in this algorithm if a Value of 1, 0 or less than -1 was input.

.....
.....
.....
..... [2]

8 Different types of test data are used during program development to make sure a program works as intended. A program being developed takes as input whole numbers that are **not** greater than 80.

Identify **two** items of test data to test the whole number limit of 80.

Explain the reason for your choice of the data in each case.

Test data 1

Reason for choice

.....

Test data 2

Reason for choice

.....

[4]
