

# Halogen compounds

A Level Chemistry · Vocabulary

| English                   | 中文    | Pinyin             |
|---------------------------|-------|--------------------|
| halogenoalkane            | 卤代烷   | lǔ dài wán         |
| free-radical substitution | 自由基取代 | zì yóu jī qǔ dài   |
| electrophilic addition    | 亲电加成  | qīn diàn jiā chéng |
| alcohol                   | 醇     | chún               |
| primary                   | 伯     | bó                 |
| secondary                 | 仲     | zhòng              |
| tertiary                  | 叔     | shū                |
| nucleophilic substitution | 亲核取代  | qīn hé qǔ dài      |
| nucleophile               | 亲核试剂  | qīn hé shì jì      |
| nitrile                   | 腈     | jīng               |
| amine                     | 胺     | àn                 |
| silver nitrate            | 硝酸银   | xiāo suān yín      |
| precipitate               | 沉淀    | chén diàn          |
| elimination               | 消去    | xiāo qù            |
| alkene                    | 烯烃    | xī tīng            |
| transition state          | 过渡态   | guò dù tài         |
| carbocation               | 碳正离子  | tàn zhèng lí zǐ    |
| inductive effect          | 诱导效应  | yòu dǎo xiào yìng  |
| bond energy               | 键能    | jiàn néng          |
| reactivity                | 反应活性  | fǎn yìng huó xìng  |
