

A diagram showing a particle's path. A black dot on the left represents the particle's starting point. A red arrow points horizontally to the right from this dot, entering a light blue rectangular region. Inside the blue region, the red arrow curves downwards. It then exits the blue region on the right and continues as a straight red arrow pointing downwards and to the right. Labels on the left describe the particle's properties, and a label on the right describes the magnetic field.

path of particle,
charge $+q$
mass m
velocity v

uniform magnetic
field B out of page
