

19 Which reactants are used to make the salt copper(II) sulfate?

- A** dilute acid + alkali
B dilute acid + metal carbonate
C dilute acid + metal
D dilute acid + non-metal oxide

20 Which statement about the Periodic Table is correct?

- A** The elements are arranged in order of increasing relative atomic mass.
- B** The reactivity of the elements in Group I and in Group VII increases as the groups are descended.
- C** Elements in the same period have similar chemical properties.
- D** Elements in Group II form ions with a 2+ charge.

21 Part of the Periodic Table is shown.

Which element shows the most metallic character?

A blank periodic table grid is shown, consisting of a 4x18 grid of squares. The grid is divided into four main sections by a large gap in the middle. The sections are labeled as follows:

- Section 1 (Top Left):** A 2x2 grid of squares. The bottom-left square is labeled **A**.
- Section 2 (Top Right):** A 2x6 grid of squares. The bottom-left square is labeled **B**, the bottom-right square is labeled **C**, and the top-right square is labeled **D**.
- Section 3 (Bottom Left):** A 2x10 grid of squares.
- Section 4 (Bottom Right):** A 2x6 grid of squares.

The grid is otherwise empty, with no elements or symbols present.

22 E is an element from Group I of the Periodic Table. Two properties of E are listed.

- It has a higher melting point than caesium.
- It has a lower density than sodium.

What is the identity of E?

- A** lithium
B potassium
C rubidium
D francium
