

Question	Answer	Marks
3(a)	Any two from: • It is easier to debug. • Less likely to make errors. • The program is machine independent/portable	2
3(b)(i)	One mark for each correct term in the correct place. • whole code • executing • all • line by line • error A compiler translates the whole code at once before executing it. A compiler produces an error report that displays all errors. An interpreter translates and executes the code line by line. An interpreter stops execution when an error is found and continues once it is corrected.	5
